The first site it explores is the continuum of space that building rooms are connected to urban rooms. The second site it investigates is perception and experience.

Architecture can be understood in two features of: the continuity of the matter-forms perceived by the senses and the continuum of the spatial forms experienced by the sequential movements.

Contextual factors include the nature of the surroundings that is natural and built elements. Basically the context determines the architectural style, building material selection and site layout, which is very important in creating an effective design. All these promote continuity between the building and local circumstances.

Continuity In the past, great works of architecture have often been produced by building environments in a continuous, evolutionary fashion rather than as singular revolutionary events. Michelangelo's magnificent design for the Campidoglio in Rome, for example, took inherited circumstances and worked with them to produce magic. The extraordinary angle between the flanking buildings and the Palazzo del Senatore was, at least in part, extant on the site when Michelangelo began his work in 1538.
