Electrostatics is a branch of physics in which we studies electric charges at rest. Since classical physics, it has been known that some materials such as amber attract lightweight particles after rubbing.The Electrostatic phenomena arise from the forces that electric charges exert on each other. Such forces are described by Coulomb's law.Even though electrostatics induced forces seem to be ...

Electric field in terms of co-ordinates is given by  $(x^2 + y^2 + z^2)^{3/2}$  Superposition Principle: The electrostatic force experienced by a charge due to other charges is the vector sum of electrostatic forces due to these other charges as if they are existing individually. 14 4TTEo In the present example, a = 1 and b = 2 to 5.

Electrostatics, as the name implies, is the study of stationary electric charges. A rod of plastic rubbed with fur or a rod of glass rubbed with silk will attract small pieces of paper and is said to be electrically charged. The charge on plastic rubbed with fur is defined as negative, and the charge on glass rubbed with silk is defined as positive.

Electrostatic:-It is a branch of physics that deals with the phenomena and properties of stationary or slow-moving electric charges with no acceleration. Coulomb's Law:- It states that the electro-static force of attraction or repulsion between two charged bodies is directly proportional to the product of their charges and varies inversely as the square of the distance between the two bodies.
