The Muscular

The muscular system is made up of the muscles of the body and the tendons (tough, dense fibrous bands that join muscle to bone) that connect them to the skeleton.

movement of the human body.

Attached to the bones of the skeletal system are about 700 named muscles that make up roughly half of a person's body weight.

Each of these muscles is a discrete organ constructed of skeletal muscle tissue, blood vessels, tendons, and nerves.

What Are the Functions of the Muscular System?

At the simplest level, muscles allow us to move. Smooth muscle and cardiac muscle move to facilitate body functions like heartbeats and digestion. The movement of these

Summary of Muscular system anatomy and physiology

The main types of muscle tissue are: skeletal, cardiac and smooth muscles.

Skeletal muscles can be moved voluntarily and are important for maintaining body temperature, by generating heat. The cardiac muscle is

Online Library
